PRODUCT

This bioceramic calcium silicate repair material features a premixed, single-use capsule for easy delivery, improved handling, and reduced risk of cross contamination

According to Dr. Sean Grady, "Root repair products are messy and difficult to use" and usually require "mixing ingredients chairside before delivering it to the area that requires repair." Thankfully, he found a convenient, no-mix root repair material in EdgeEndo's EdgeUtopia RRM, a versatile, premixed calcium silicate repair material with a convenient unit-dose delivery system.

"Because EdgeUtopia RRM is prepared and delivered in a unit-dose capsule, it is much more convenient than other similar materials," Dr. Grady shared. "It does not require mixing a base, catalyst powder or liquid, and it's easily delivered to the problem area for repair." Using EdgeUtopia RRM "speeds up the process, which is something we are always looking to do," he added.

In addition, Dr. Grady appreciates that the product has "multiple uses besides endodontic root repair and fills several voids in my armamentarium." So far, he's used it for pulpotomies and pulp capping, and said it is "much, much better in many ways than similar materials." EdgeUtopia RRM is now his go-to root repair material. "I love it and will certainly purchase it for my practices."

Premixed Monodose Capsules

Delivered in premixed, ready-to-use monodose capsules, EdgeUtopia RRM requires no manual mixing, and the single-dose application ensures mess-free delivery with no risk of cross contamination. Each 0.15 g capsule is designed for easy application using the reusable EdgeUtopia RRM dispensing gun.

Endodontist Dr. Alan Sedell noted that "bioceramic repair materials and MTAs are two of the most difficult materials to mix consistently, which makes placement very challenging." He was thrilled that EdgeUtopia RRM "eliminated any mixing procedure, which is always the most stressful part of utilizing bioceramic

repair materials." He also appreciates the product's "easy placement and consistency" and called it "a real time-saver and much less frustrating to use."

Praising the uniform consistency of EdgeUtopia RRM, Dr. Jonathan Dubin likes that it is "ready to use with no mixing" but suggested a "slightly smaller tip diameter for delivery." Dr. Donald Roman said, "The premixed material in unit-dose compules is easy to dispense and handle and saves time." For Dr. Nathaniel Behrents, "The premixed cartridges made delivery easy and sped up root repair times." Another endodontist said, "The unit-dose delivery gave me confidence that I was using a product that was not dry or contaminated." Dr. Alfred dela Cruz declared, "The fact that it's premixed inside a carpule is significant, as ease of use is important during surgery."

Consistency and Handling

Praising EdgeUtopia RRM's "excellent handling, great condensible putty consistency, and better adaptation," Dr. Malik Al-Grouz said, "The putty consistency made it easy for me to condense while maintaining the material from extruding." Naming "ease of use and handling" as his favorite features, Dr. Roman suggested "the ability to thin the mixture if needed."

takeaways

- Premixed calcium silicate repair material with convenient unit-dose delivery
- Versatile material suitable for all root and pediatric repair needs
- Bioceramic properties release Ca2+ to promote tissue healing and regeneration
- Single-dose application reduces mess and eliminates risk of cross contamination
- Dispensed in a 0.15-g capsule with EdgeUtopia RRM's reusable dispensing gun (sold separately)

Alfred dela
Cruz, DDS; San
Ramon, CA

"It is the best bioceramic repair material I've used so far."

Dr. dela Cruz commended the material's "ease of delivery, thickness, and easy manipulation and handling." A pediatric dentist, whose favorite features were the "ease of working with the material and the radiopacity," said the material did not stick to instruments, "which was very helpful."

Versatility and Final Results

EdgeUtopia RRM is a versatile material suitable for all root and pediatric repair needs. It is indicated for treatment of lateral and furcation root canal perforations, internal resorption, reverse root filling, direct and indirect pulp capping, apexification, and apicogenesis. The material's bioceramic properties release Ca2+ to promote tissue healing and regeneration.

"EdgeUtopia RRM is a quality product with multiple endodontic applications," shared Dr. John Horn, who primarily used it as a pulp capping material. Dr. Joshua Conway called it "a great solution for direct pulp caps that made treatment easier and more efficient," and reported, "Postop results have been good so far." Dr. Al-Grouz is "very happy with EdgeUtopia RRM, especially as an apical plug putty for open apex cases," and the pedodontist reported "excellent" results when used for "pulpotomies on primary and permanent teeth."

For Dr. Anthony Pan, "EdgeUtopia RRM worked great and was easy to use with success and predictability, quicker chair time, and less redos." Although he would

like to see a lower cost for the material, he believes "the price is justified" because of "the success and speed with which treatments are performed."

Overall Satisfaction

Most of the evaluators indicated they plan to use EdgeUtopia RRM in the future, with Dr. dela Cruz calling it "the best bioceramic repair material I've used so far." Not-

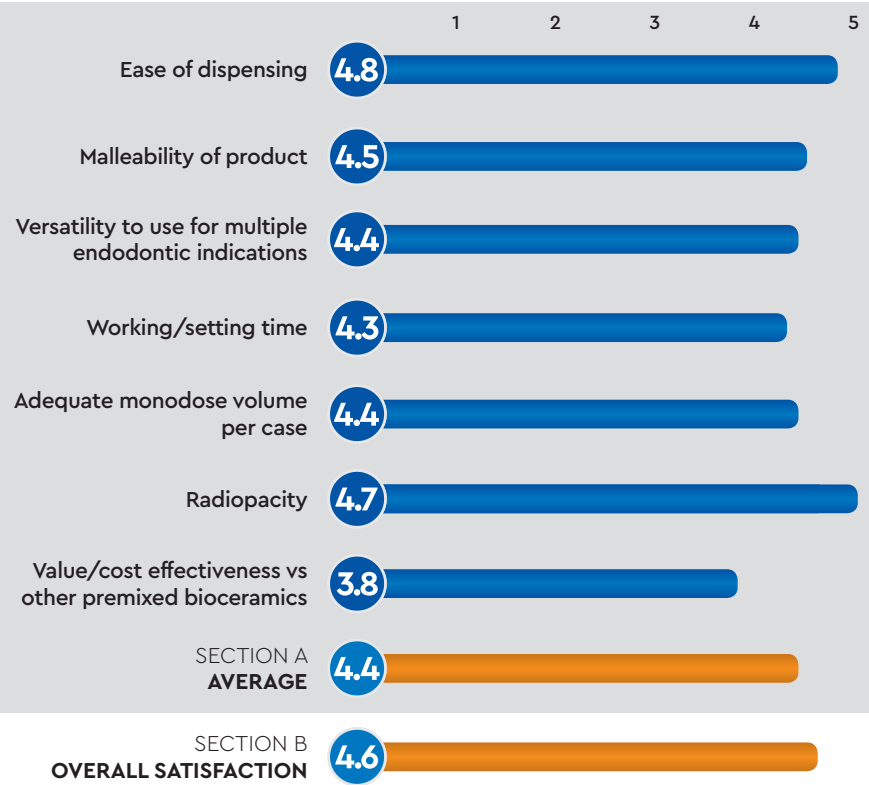

ing that "it's a valuable addition to my endodontic armamentarium," Dr. Sedell declared, "The capsule and delivery system make it easily the most user-friendly version of bioceramic repair materials I have come across. It makes the application for repair procedures much quicker and easier, which makes my clinical life less stressful and more productive."
